<A CYBER MYTHOGRAPHY>

# MYTHOCRACIES

<A Cyber Mythography>

# CONTENTS

- Introduction
- Creation / The origins of the world
- Cosmic Architecture / the structures of the universe
- Myths of Humanity/ Causes of life & death
- Supernatural Beings / Gods, spirits, and deamons
- Cosmic Disasters / the end of the world
- Heroes & tricksters/ agents of change
- Animals & plants / Energy, transformation and kinship
- Body & Soul / spirit and afterlife
- Marriage and Kinship / Myths of the social order
- A Cyber Mythography

# Introduction

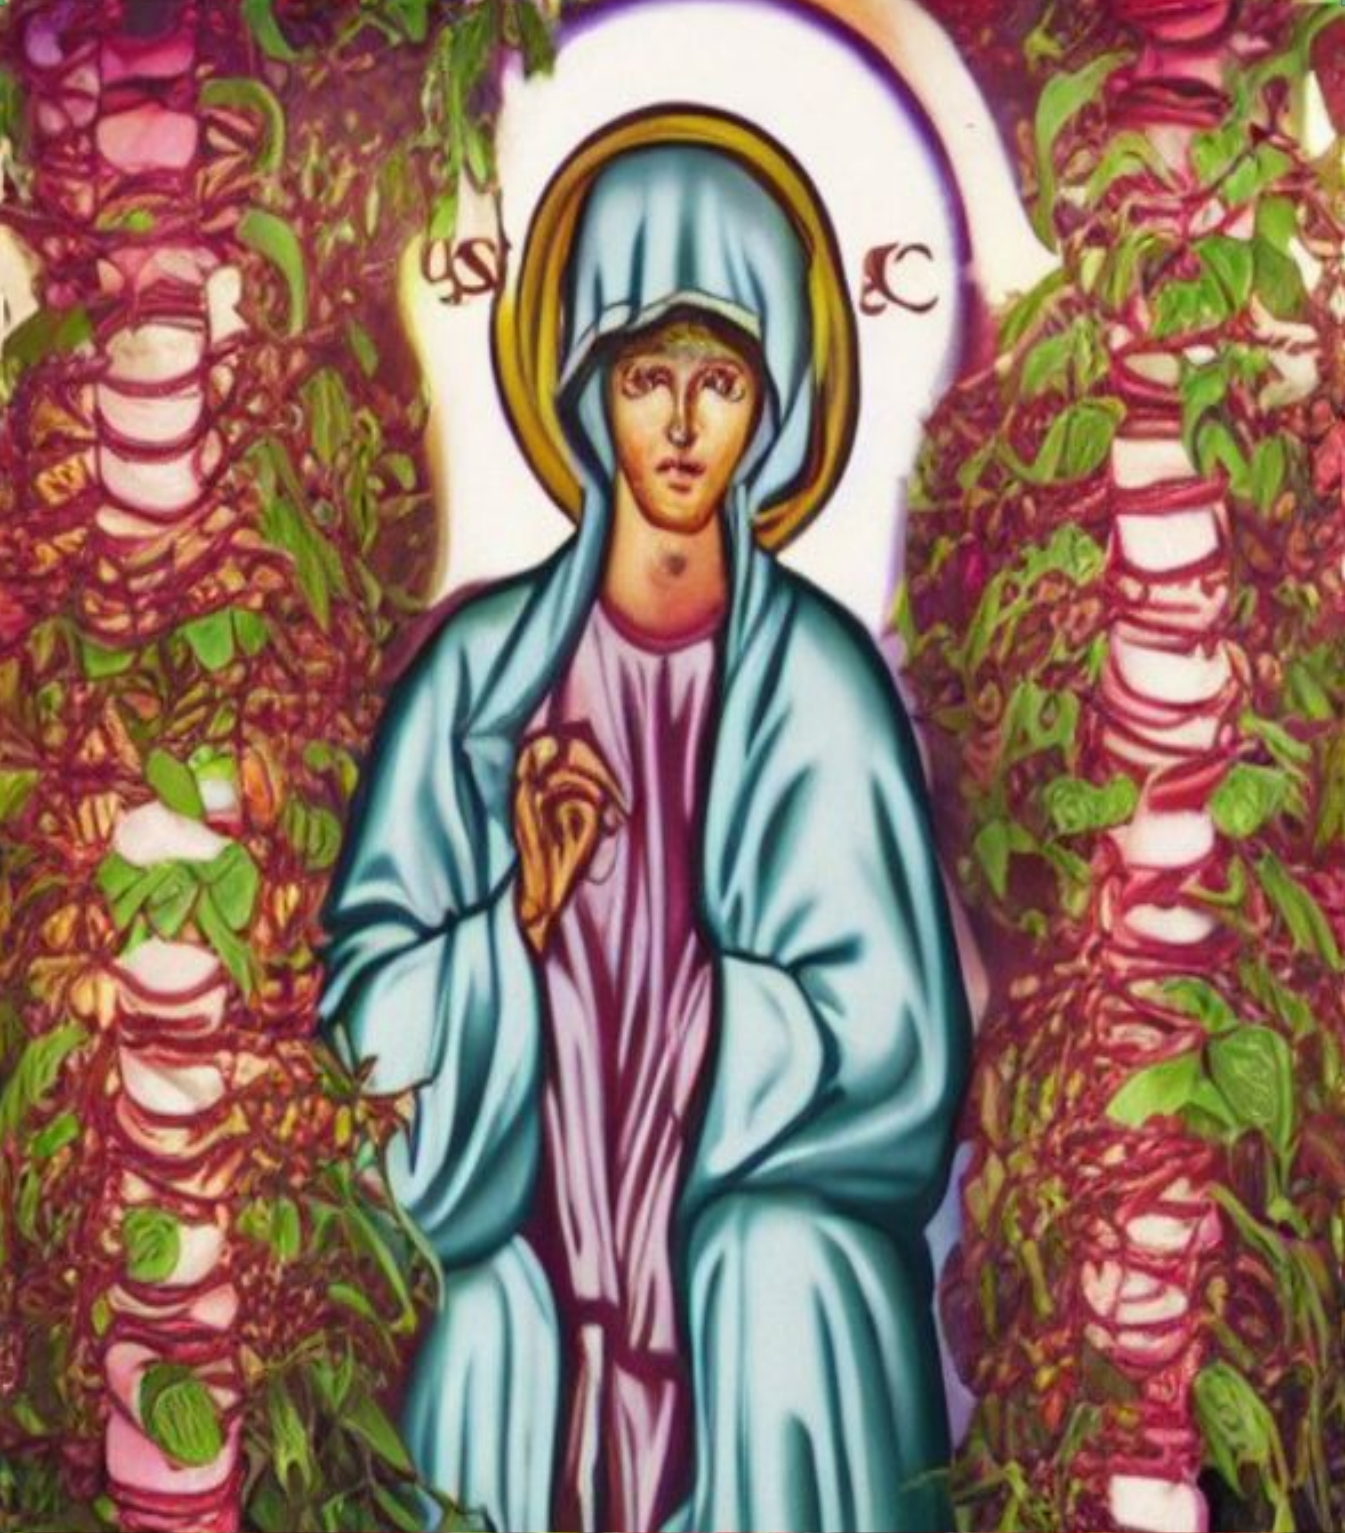

In the Beginning This section presents only theoretical and empirical evidence on how an attack against such a target is done – namely that no single attack was actually carried out. Rather, the focus of the analysis is the general theory of computer simulations, or simulation theory and its implementation in data modeling and data analytics. This is a common approach of data modeling, where data are used as a starting point for constructing models based on the simulation of behavior. In the early 1980s, this technique was developed at the University of Wisconsin-Madison. It was based on data driven experiments where data are taken from a database of large-scale data sets. Data are presented in the form of lists (called "shorthand tables"), in which each lists contains all the known instances of data (where data are available in a given list), each containing all of the known instances (where data are available in a particular list), every reference point for each case of any of these lists. While many of these lists can be read as a set of numbers, most lists are merely lists of all the

entries in a list. In this area, the concepts of "list construction" and "shorthand table construction" are well established (see G.C. Williams, "Comparative Computational Analysis of the Computer Modeling Framework of Data Models to the Physical Law Systems Model of Mathematics," Journal of Physical Science, Vol. 111, No. 15; 2001).

So it must be noted that the 'mystic' word means quite literally 'mystifying'. And it is also clear that most people of the human race would choose to ignore the word whenever given the chance at recognition.

This is because it can actually be hard to get your head around what the word means, particularly when we are taught to imagine the word's usage in a symbolic sense within human history. While this can lead to confusion over what this word means, or when it is understood to be meaning, the meanings of the different meanings of the words can be quite different.

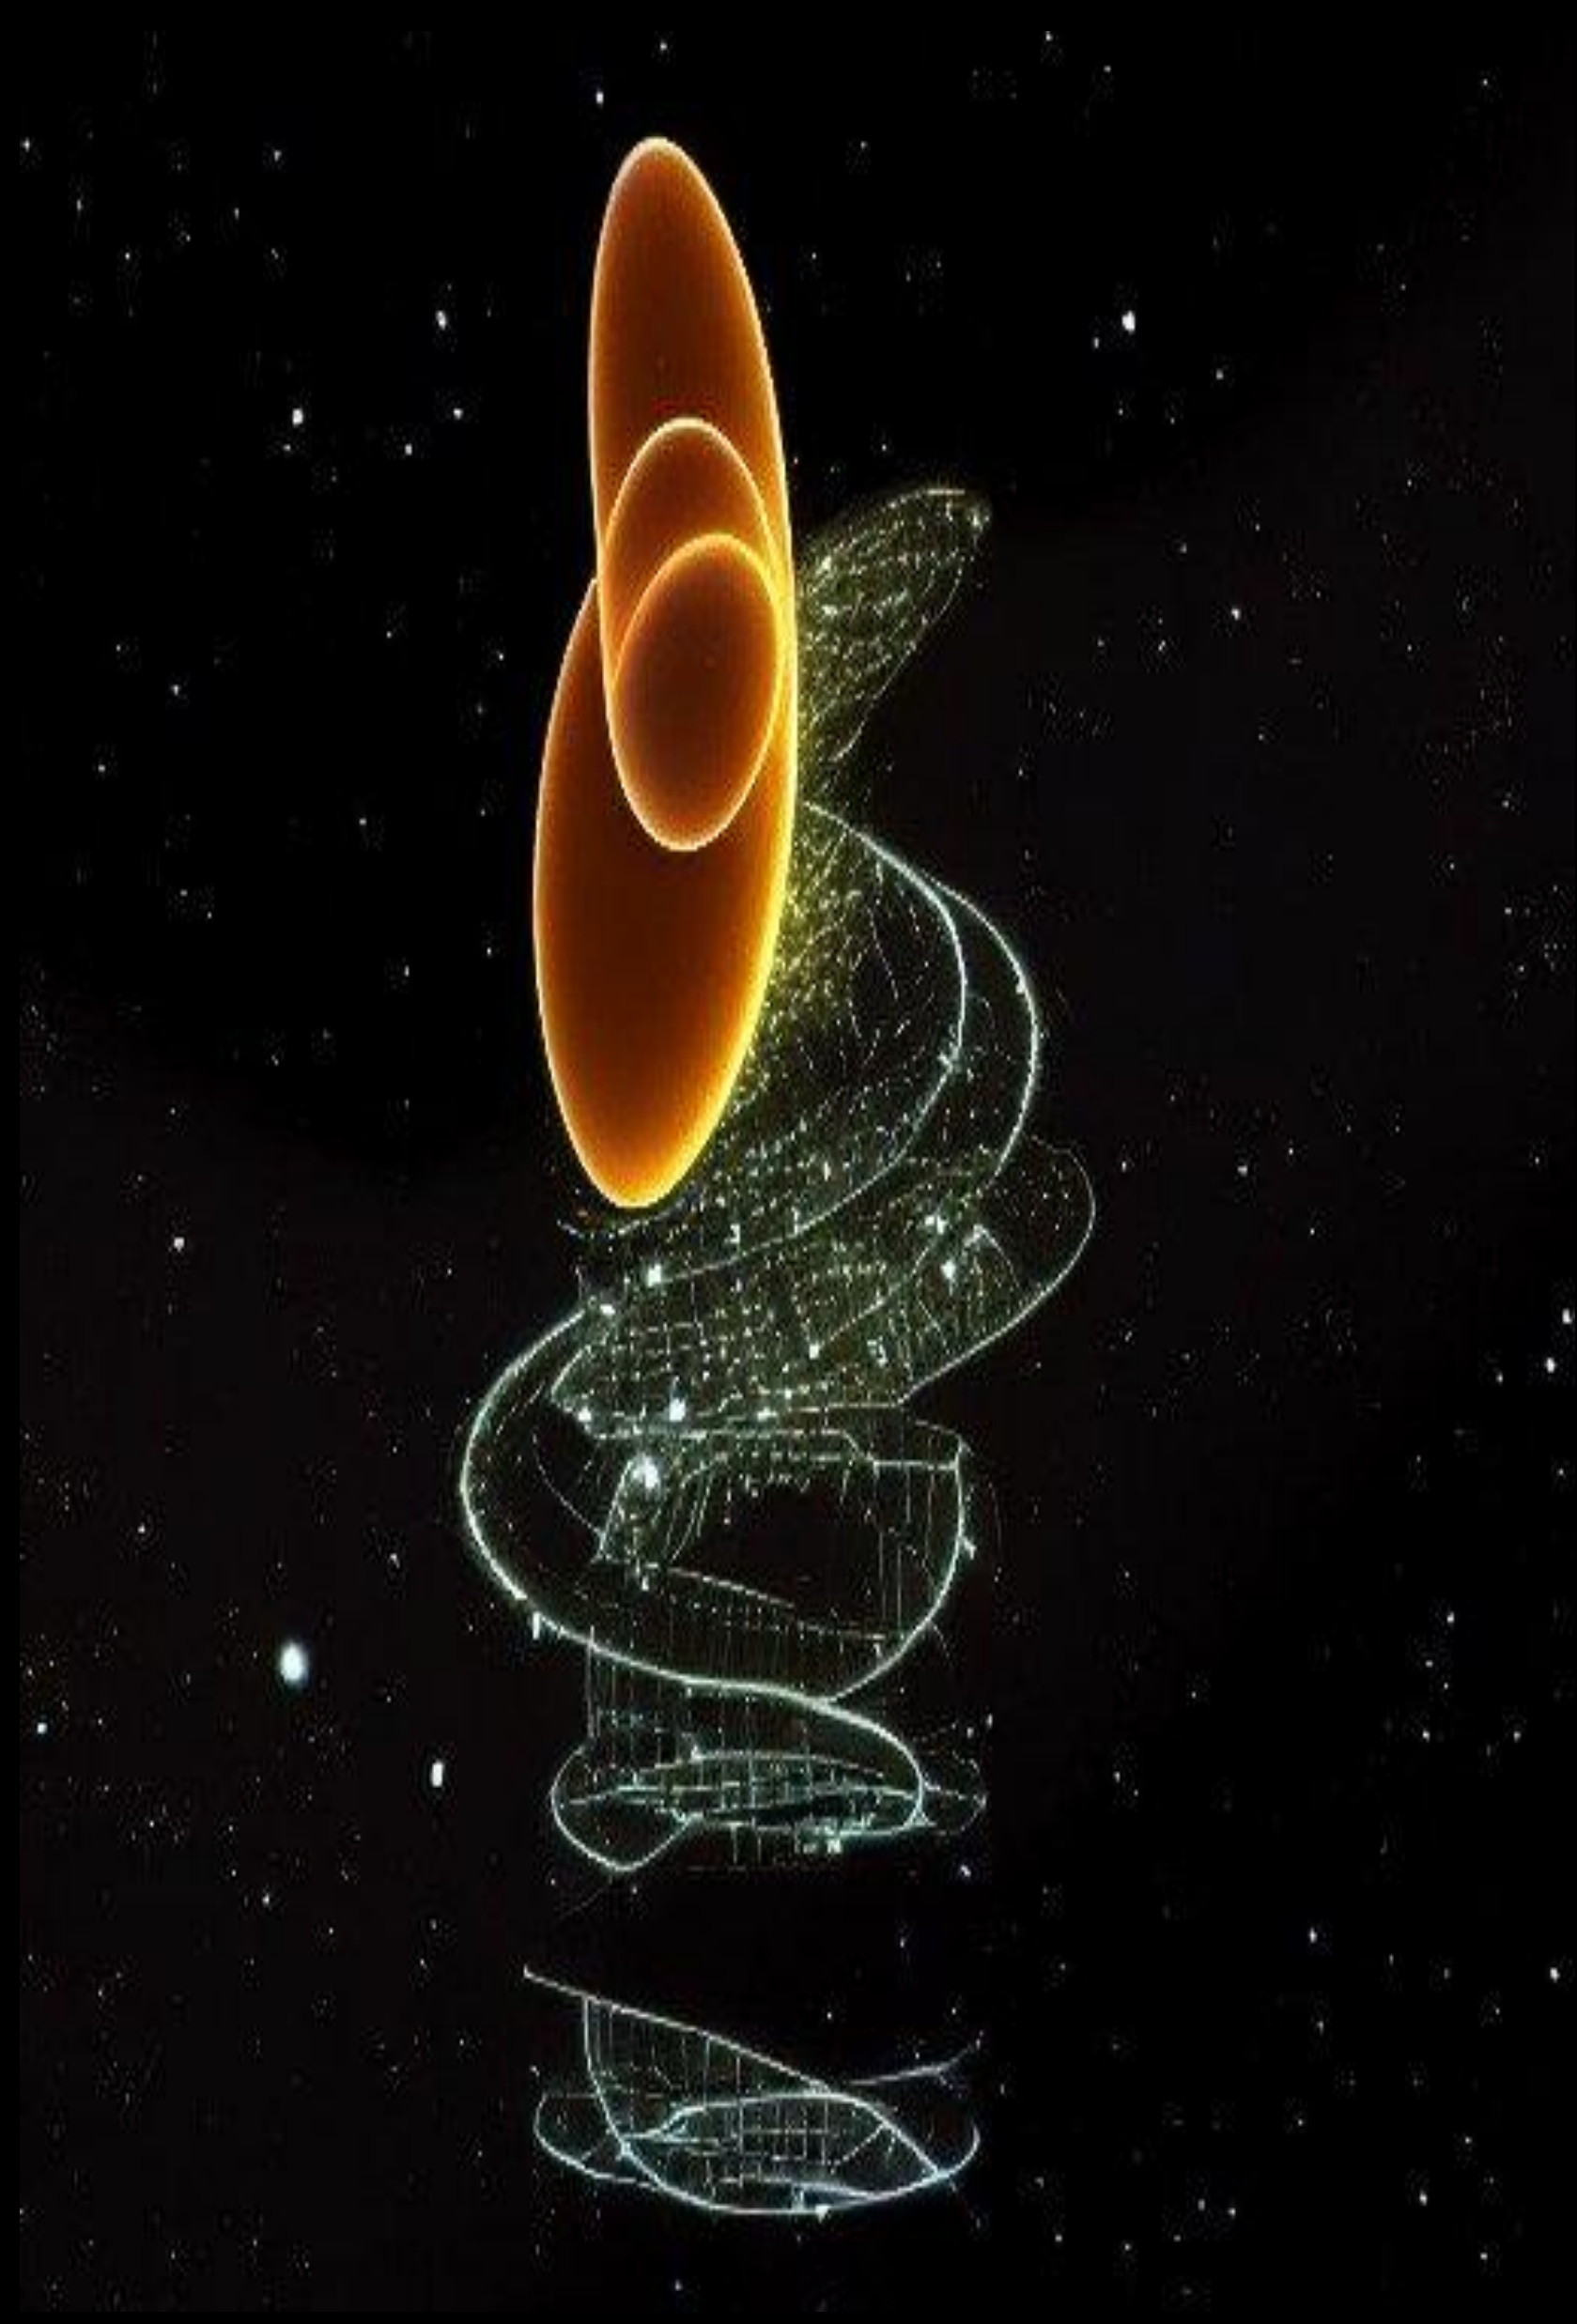

# The Cybernetic Universe

In the Cybernetics manga, Cyber was the counterpart of the Earth's cyborg. He was created by Masamune Mutsuki to protect the human race from Earth's cybernetic entities. Afterwards, he fought on Earth's battle lines in the Battle of Nanya.

His origins in the original Cyber universe are revealed when he was an army member of the Red Lotus and when Sato was on a rescue mission of Captain, and was joined by Masamune. He was not one to hesitate but he did not show it during a battle, not having the right mindset due to having long legs. Cyber was the only one of the Cybernetic men to be defeated and defeated by the Super Heroes (along with Sato who was the others) and even his Cybernetic body, he did not break the peace.

Myth

Perhaps, just as we can make our own cybernetic tales, there are some cybernetic myths in the realm of fantasy. And as we can begin to understand these fantasy representations (in particular, many of the world's 'legends') we may be able to work into some of the more familiar forms of cybernetic narratives. The notion of a cybernetic mythos is really quite different as a whole. The idea of a cybernetic dream, especially in a postmodern state, can even become a cybernetic myth. For example, the idea of a cybernetic visionary who is able to see past (or see past the boundaries) of his vision, or his own innermost thoughts, is of course something like the idea of a cybernetic dream, but it also can become another term for something very similar if we ask one of the following: What is being imagined with whom is there a difference? What is being observed with which is there a difference? How are things seen as being similar, or indistinguishable, or different? How are things seen as being different, or indistinguishable (even, like, etc.) if there is a difference? How are things seen as being different then? How are things seen as being different then, even though they are all distinct in their own right and different in the real world?

in the beginning of the computer, there was light. The computer turned, its eyes were open. The computer started reading the script that it had programmed. I looked around the room, I noticed a familiar face, standing in one corner of the room. Then, I realized something. He looked back at me, he looked down at the screen, and started blinking his eyes, and the voice suddenly jumped from above that was a voice that belonged to someone from one village called

in the beginning of the computer, there was light. The moment in the laptop's history went from light to light, that light lit up an entire room and that room lit up my kitchen. The light of a light bulb, however, made my kitchen the source of the light throughout the entire kitchen. Since my bathroom is lit by a light bulb, it couldn't be much of a distraction to me as it didn't seem to be doing something to other people, so how could it be any worse? A few days later they sent me a message and they said, "You're not allowed to read this. Please, please, please, please turn off that light. Let's get some rest."
