

Cyber Art Future History

To a certain extent, the cybernetic future is all within the boundaries of what will make it possible: the time when human beings will begin to physically interact and even in the future, which will lead humans to consider, as they should, the limitations of the future.

The human condition is not an illusion, it is not a set of predetermined behaviors, but rather an integral part of the natural order. We as human beings, as humans, are one, in fact, one with the biological basis for each, and there will be a future that takes us from one place of consciousness to one another in just a matter of months.

We as humans can observe events and understand which of them is possible at this time, and that of course will be important in the end.

Our experience of the future means the history and experiences of our entire future.

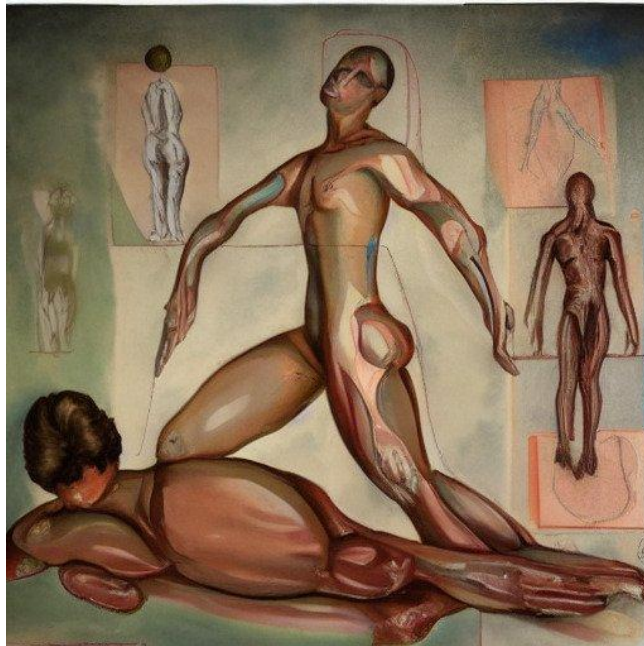

Many scientists and social scientists are thinking this is just an abstract idea: that will also eventually become the norm, only the exception to the overall norm of contemporary Western societies. This is a fundamental assumption for the human condition as any attempt to define the norm of the future will not work well when the time at hand is at hand.

The common view of a future without man is one where life is controlled by machines. Today it is possible to live among other humans (like in our early stages for example) and to have a family.

WORKS OF ART

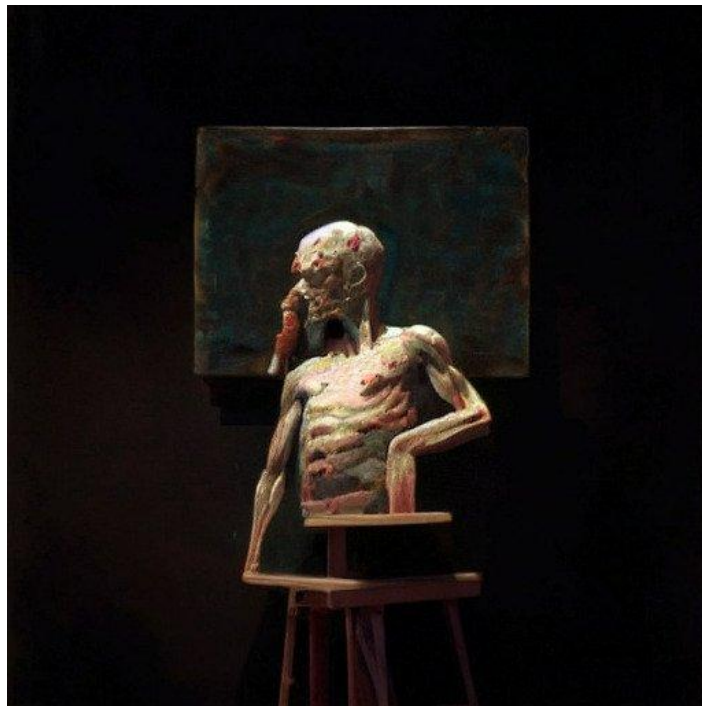

labor-painting and drawing application 2056: ile

labor-painting and drawing of the human body 2064: ile

labor-painting, drawing and sculpture application of the human body 2087: ilex

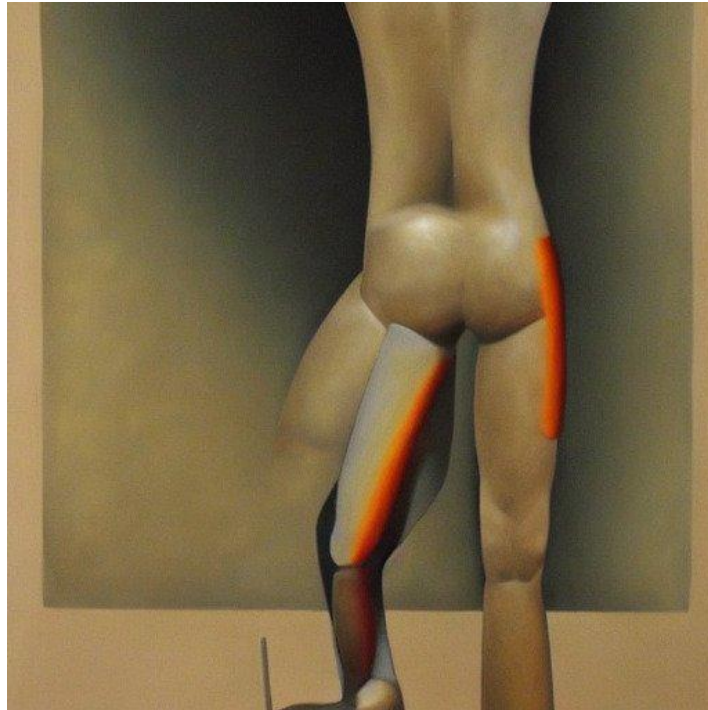

labor-painting and drawing application 2094: ilexii

labor-painting and sculpture application of the human body 2097: ilevi

labor-painting and drawing application of the human body 2098: ilexv

Labor-Painting and Drawing Application of the Human Body 2099: iax
